FOREWORD

Pharmaceuticals have always been an integral part of healthcare system and will remain so in the future. With the advent of innovative interventions its role has become even more critical to the health system and requires its continuous availability while maintaining high quality, effectiveness and affordability. Ethiopian Pharmaceuticals Supply Agency (EPSA) is a public agency entrusted with this role in Ethiopia. Though the Agency has been working hard to ensure the continuous availability of needed pharmaceuticals at service delivery points, there is still huge gap between demand and supply in pharmaceuticals.

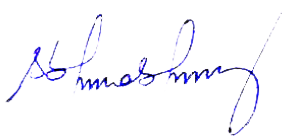

Defining the procurement list for pharmaceuticals to be available in the private and public sectors is a global concept that can be applied in any country. However, the decision about exactly which medicines should be selected and included in the list is a very decisive consideration. Before 2018, EPSA was managing all kinds of pharmaceutical requests without having a defined list of pharmaceuticals for procurement. Establishing and using a defined list of carefully selected essential medicines is perhaps the most cost-effective action that any health care system can take to ensure regular supply of pharmaceuticals. Taking this into account, the Agency developed the first edition of Pharmaceuticals Procurement List (PPL) in 2018 and has been undertaking its operations with a focus on key pharmaceuticals as per the list. The introduction of the Pharmaceuticals Procurement List is one of the major undertakings to achieve the Pharmaceuticals Sector Transformation Plan (PSTP) and enabled the Agency to define its product portfolio.

After series of consultations with stakeholders involving relevant experts in each area from health facilities, FMOH, RHBs, EPHI, development partners, professional associations and the Agency, second edition of the list is now ready for use.

We are proud to introduce to you this second edition of the Agency's Pharmaceuticals Procurement List which has got buy-in by the concerned stakeholders. Proper implementation of the list is expected to bring about significant improvement in the availability of pharmaceuticals at service delivery points. The list will set a reference against which the Agency's performance can be measured, and health facilities and other stakeholders know what can be availed through EPSA. It will also encourage the private sector's involvement in availing pharmaceuticals which are not included in this list and also persuades them to healthy competition. The list contains all

categories of pharmaceuticals with full and standardized description of each product. The list has also included annexes for pharmaceuticals to be supplied once the budget is granted by health facilities or FMOH to EPSA. Users of the list are expected to consistently use the descriptions used in the list in all communications and transactions they undertake for smooth exchange of information along the supply chain.

We would like to call upon all stakeholders to provide the necessary support for effective implementation of the list and continue their support in updating the list by forwarding comments and suggestions to the Agency through its website (www.epsa.gov.et) or via mail (P. O. Box 21904, Addis Ababa). We also would like to take this opportunity to thank all who directly or indirectly contributed for the development of the list.

INTRODUCTION

The Ethiopian Pharmaceuticals Supply Agency (EPSA), is a public institution established to ensure continuous availability of quality pharmaceuticals at an affordable price to public health facilities through need-based pooled procurement. The Agency has made notable achievements over the past years in terms of procurement, distribution, inventory management and warehousing.

Regardless of the efforts made and achievements gained so far, there is still a huge gap in ensuring the continuous availability of pharmaceuticals to the public. Moving forward, to strengthen the countries supply chain and the agencies business operation, the agency is under implementation of the revised transformation plan from 2018 to 2022 with the strategic objectives: achieve financial and operational self-sufficiency, ensure high levels of product availability and delivery of excellent customer service, and increase the level of Supply Chain Management (SCM) expertise and provide the staff with rewarding careers. To achieve excellence in its operations and thereby realize its vision, EPSA was required to evaluate its performance and develop a new strategic plan for the coming 10 years (2020-2030), aligned with the country's second Health Sector Transformation Plan (HSTP II).

EPSA revised its vision to be the most responsive and efficient pharmaceuticals supply chain organization in Africa. As per the new vision, the agency works to ensure sustainable supply of quality assured essential pharmaceuticals to health facilities at affordable price through establishment of pooled procurement, robust inventory management and distribution, effective financial management, integrated management information system, and attracting and retaining motivated and competent workforce.

Overall outputs from the situational analysis conducted to evaluate improvement so far indicated that progress is being made in all areas of the supply chain operations. Based on the situational assessment, stakeholder feedback, and the revised mission and vision statements, the Agency will focus its new 10 Year program on four strategic themes: Excellence in Customer Service, Financial Sustainability, Operational Excellence, and Excellence in Human Resource Management, Leadership and Governance. Through these strategic themes, the agency intends to deliver high levels of customer satisfaction, improved financial capacity to operate the supply chain, a flexible and reliable operational model, and a learning organization with skilled and talented staff.

As part of the Agency's strategy to transform its overall operational activities, the Agency has made remarkable progress in the area of procurement over the last two years following the implementation of the recent business process reengineering.

To reduce year-round repetitive tendering and procurement, the Agency has implemented long term framework agreement procurements. Currently, products for HIV/AIDS, family planning, malaria, and RDF vital of vital pharmaceuticals, medical supplies and chemical reagents are procured by long term framework agreement.

To this end, putting in to consideration the advancement of medical and pharmacological technology and experts' recommendation leads the Agency to revise the previous edition of the procurement list which will be used for the annual quantification and procurement on the basis of the types of pharmaceuticals for the next three years. The list of pharmaceuticals (medicines, medical supplies, medical equipment, and laboratory chemicals and reagents) included in the first edition were critically reviewed by relevant experts in the consultative and validation workshops organized by the Agency. Medical equipment is categorized into capital and non-capital groups based on their complexity. Capital equipment is those that require signing official agreement with the Agency to initiate the procurement process. The Agency has decided that tenders for the procurement of capital equipment will be floated twice per year to minimize the burden associated with the repetitive tendering in practice so far.

The Agency leads effort to ensure the continuous availability of the pharmaceuticals included in the list and the list will be revised every three years. The Agency will also strengthen its collaboration with all supply chain players to fully realize its goal. Since success of the initiative depends on all stakeholders across the system from the national policy makers to the end user the agency encourages you to support access to essential medicines in Ethiopia.
